A vertical reed bed for 8 person equivalents.

The reed bed was built during March 2004 within 3 days.
A medium sized excavator helps minimizing the damage to the garden.

Different sorts of sand and gravel are filled in as filtermedium.

Completion of the reed bed.

Additional work, like laying of pipes and drains, where done in dry weather.

... and one year later, seen from the same location.

In June 2005 the reed has developed to a dense stand of about 1 m height, thanks to an even distribution of the effluent and full sun exposition.

The performance of the filter is excellent.

What else?

... we also offer assistance in integrating the sewage plant into your garden.

In this case the runoff was lead through a small pond.
